Extracurricular Activities

- Computer Science Junior TA in the GUC

- Supported students during lab sessions
- Provided clarification and guidance on course content and assignments
- Offered one-on-one or small group support to students needing additional help.

- Student Union President of the Academic Year 2022-2023

- Represented the student body at institutional and external forums
- Chaired executive meetings and led a multifunctional student leadership team
- Advocated on key issues such as academic policies, student welfare, and school life
- Oversaw the union's budget, campaigns, and annual planning cycle
- Promoted student engagement and democratic participation through events and elections

- President of the Model United Nations Club (MUN)

- Recruited new delegates from grades 7 to 12.
- Held weekly training sessions to practice debating, writing and giving speeches, and researching on countries and international politics.
- Coached potential delegates through their journeys to their first MUN.
- Organized club members to prepare for, and to attend conferences, domestic or abroad.

- President of Students Eager to Thrive Club (SET)

- Founded SET to enhance and improve students' high school experience.
- Educated students on ways to make the maximum of their high school years.
- Familiarized students with scholarships and programs they can participate in - domestic or abroad.
- Executed events where graduates, who got in top schools or won scholarships, tell their stories, give advice, and answer questions.

- Yale Young Global Scholar Ambassador in the Gulf region 2023

Projects

- **Developed an advanced version of the Jackaroo board game** using Java and JavaFX, incorporating complex game logic and an interactive GUI.
- **Designed and built a circuit filter** involving both software simulation and hardware implementation for signal processing.
- **Created a student schedule generation system** using Prolog, applying logic programming to optimize course assignments and time slots.
- **Programmed the software architecture of a basic computer**, simulating core functionalities such as instruction execution and memory operations.
- **Engineered a railway network management system** in Haskell, leveraging functional programming principles for route planning and system integrity.

Experience\ Community Service

-Volunteer at Resala Charity

- Collected Clothes to be donated annually using school campaigns

-Volunteer at Share a Smile charity

- Packaging and distributing food

-Created an online support group for anyone struggling with quarantine and online schooling
